

1. Boundary Test – Minimum Bake Time

Goal: Make sure the pizza is not considered done before the minimum amount of time.

Input: Bake time = 0

Behavior: Pizza should remain raw, no finished state triggered, no score given

Tests the lower boundary of baking time

2. Boundary Test – Max Bake Time

Goal: Ensure that pizza burns at the upper limit

Input: Bake time = maxTime

Behavior: Pizza becomes burnt, cannot be served to customers, player receives score penalty.

3. Stress Test – Multiple Pizzas Simultaneously

Goal: See how the system handles heavy load

Input: Player places a growing amount of pizzas on the oven rapidly, all bake at once with separate timers.

Behavior: No lag or crashing, separate bake time tracking, correct transitions between (raw, cooked, and burnt)
