Description

The Oven prefab represents the baking station used to cook pizzas. Players can drag a pizza into the oven, press the bake button, and monitor the baking progress. The oven plays sound while baking and visually indicates the state of the pizza (raw, cooked, burnt).

This prefab is fully modular and ready to drop into any 2D scene.

Includes

- Oven GameObject (Visual + Collider)
- OvenTrigger script (Detects pizza entering/exiting oven)
- Audio Source (Looping bake sound)
- Bake Button (Starts baking)
- Bake Progress UI (Slider + Color feedback)
- All required components pre-configured

Features

- Drag-and-drop pizza interaction
- Baking system with visual progress bar
- Progress bar color transitions: Green (raw) → Yellow (cooking) → Red (burnt)
- Plays audio while pizza is baking
- Detects pizza entering and exiting the oven
- Prevents baking when no pizza is inside
- Clean, reusable, and easy to integrate

How to Use

1. Drag the Oven prefab into your 2D scene.
2. Ensure the Audio Source has an assigned baking sound.
3. Make sure your pizza objects have the required scripts (PizzaBaking, DragPizza, etc.).
4. Press Play and drag a pizza into the oven to start baking.
5. Use the Bake button to begin.

Requirements

- Unity 2022.3.42f1 or later
- 2D Project
- Audio clip for baking (loop recommended)

Notes

- Designed for 2D games
- Uses OnTriggerEnter2D / OnTriggerExit2D for detection
- Compatible with dynamic binding (Food → Pizza system)
- Uses Singleton GameManager for global control
